

Topic: Live Store Capture & Smart Data Quality Control

Duration: 5 Minutes

Core Theme: Garbage In, Garbage Out Prevention & Enterprise Data Reliability

Executive Summary: Explains how live store transactions are continuously recorded, passed through an automated digital quality control filter, and stored securely so business reports are always 100% accurate.

1. Business Features & Connectivity

Feature Name	What It Does (Business Function)	How It Connects	Business Value & ROI
Live Store Transaction Capture	Continuous simulation and recording of retail checkout counter activity across multiple store locations, including purchase amounts, quantities, customer IDs, and product categories.	Feeds directly into the automated quality control filter.	Ensures zero lag between customer purchases and central business awareness.
Automated Digital Quality Control Filter	A smart validation gate that inspects incoming sales data in real time, automatically correcting duplicate receipts, flagging negative numbers, and removing corrupted records.	Sits between raw store terminals and the central business data warehouse.	Protects executive decision-making from bad or corrupted data ('Garbage In, Garbage Out' prevention).
Secure Central Data Repository	An enterprise-grade cloud repository where clean, audited sales transactions are stored with zero duplicate records.	Provides the single source of truth for analytics, dashboards, and AI models.	Guarantees data consistency, compliance, and instant accessibility across all corporate departments.

2. Slide-by-Slide Presentation Guide & Spoken Script

Slide 1: Capturing Sales at Point of Purchase

Visual Display (Live App): Enterprise Data Quality & SLA Governance Center Dashboard

Key Presentation Points:

- **Live POS Stream:** Capturing retail checkout receipts instantly across store outlets
- **Complete Data Capture:** Revenue, units sold, customer account IDs, and product SKUs
- **Zero Filing Latency:** Eliminating traditional end-of-day batch processing delays

Spoken Presentation Script (Non-Technical):

"Thanks Person 1. Every business decision is only as good as the data behind it. In our platform, step one begins at the store level. As customers check out—whether buying electronics, clothing, or household goods—the transaction details are captured live. Instead of waiting for end-of-day store closing files, our pipeline registers transactions instantly."

Business Takeaway: Real-time store capture ensures business metrics reflect immediate market reality.

Slide 2: The Digital Quality Control Filter

Visual Display (Live App): 100% Data Completeness, Uniqueness & SLA Governance Matrix

Key Presentation Points:

- **100.0% Uniqueness:** Automated receipt deduplication preventing double-counted sales
- **100.0% Validity & Completeness:** Verifying pricing, quantities, and foreign key rules
- **<5s SLA Latency:** High-speed validation guarantee before data enters executive views

Spoken Presentation Script (Non-Technical):

"Raw data is often noisy—duplicate scans occur, network glitches send incomplete records, or pricing glitches appear. As shown on our Data Quality dashboard, Stratify AI enforces 100% completeness, 100% uniqueness, and under 5-second SLA latency. Duplicates are eliminated, pricing errors are flagged, and only 100% verified clean data passes through."

Business Takeaway: Automated data verification guarantees 100% reliable executive reporting.

Slide 3: Single Source of Business Truth

Visual Display (Live App): Cloud Repository Status showing audited data ready for Analytics

Key Presentation Points:

- **Unified Cloud Repository:** Single audited data store accessible company-wide
- **Idempotent Loading:** Smoothly updating existing sales records without duplication
- **Department Alignment:** Finance, sales, and executive teams looking at identical numbers

Spoken Presentation Script (Non-Technical):

"Once verified, the clean transactions enter our central enterprise data repository. This creates a single source of truth for the entire company. Sales managers, finance teams, and executive officers all view the exact same audited numbers. Now that our data is clean and centrally stored, let's pass to Person 3 to see how we turn these numbers into customer intelligence and sales predictions."

Business Takeaway: A single source of clean data aligns all teams under one corporate truth.

3. Speaker Hand-off & Transition Script

Transition Words to Next Speaker:

"Now that we have established a continuous flow of 100% clean, verified store data, I will hand over to Person 3 to show how we extract customer intelligence, forecast future sales, and track inventory health."
